

CASE STUDY

The Passage

LAN, Wi-Fi and Security Transformation

The Passage provide the UK's largest centre for homeless and insecurely housed people, they offer immediate help and longer-term support, and also provide and develop a wide range of value-led support services, including innovative accommodation projects.

The Passage engaged with Fluid to deliver a network transformation project. The scope included design and implementation of an enterprise class security, LAN and wireless network for staff, guest and service users of the organisation.

Fluid worked with The Passage to define their strategic technology requirements and to implement a network that met the organisations security and operational goals. Post implementation Fluid continue to provide added value to The Passage with support and project services.

Goal: To implement an enterprise class security, LAN and wireless solution for staff and guest users.

Infrastructure Review to capture the full scope and requirements for the project. This included a deep dive in to existing firewall policies, LAN deployment and wireless security controls.

Design a fully resilient solution that provides full visibility in to the environment and a **management platform** that can be utilised by a small IT department to control and manage the user estate.

Plan, configure and deploy the solution with minimal downtime and impact to the business.

Provide a full knowledge transfer to Passage IT staff on the solution implemented.

Support The Passage with ongoing **project and infrastructure support services**.

CASE STUDY

BDO UK

The Fluid infrastructure team engaged with The Passage, captured the organisational requirements and designed a best in class enterprise network based on Cisco technologies. The solution enabled The Passage to improve IT management and have far greater visibility in to operational activities

The solution provided The Passage with the visibility and control to manage the network efficiently and effectively

Pre and post assessments were completed to ensure the wireless solution met the customer requirements for staff and guest connectivity.

Operational support was provided to ensure ongoing functionality of business critical applications

“The Fluid team worked closely with our IT department and have delivered on the design brief and provided a fully resilient and secure network. The solution implemented provides us with the control and visibility into what is happening on our network, something we haven’t had previously. The project was delivered on time and on budget and we continue to work with Fluid on future projects. ”

The Passage

Conclusion

The Passage identified a requirement to upgrade their network infrastructure with a more secure and resilient solution for its staff, guests and service users.

Following an engagement with Fluid a resilient enterprise solution was delivered that not only provided the controls required but also simplified the network providing a standardised environment that is easier to manage.

Fluid have created a trusted relationship with The Passage and continue to provide ongoing project and support services.
